Disruptive technology for energy asset monitoring and rapid leak detection that's simple to use, smart, and environmentally sensible. **Be sure.**

Protect What Matters, 24/7

population centres, and water crossings.

Monitoring With Instant Alarms, Without False Positives

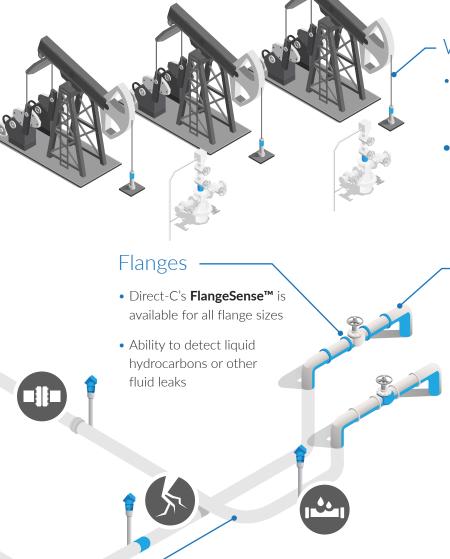

leaks with Direct-C's patented nanocomposite technology 1%. Receive warnings for assets operating outside of targeted parameters such as temperature, flooding or ground movement.

Simple to Install, No Power Cables or **Communication Gateways Needed**

Self-contained monitoring systems can be installed and commissioned within minutes. Battery powered to communications from even the most remote locations in the world, 24/7.

Tanks

- Direct-C's WrapSense[™] can be used to monitor for leaks underneath or around above-ground tanks, or for product buildup within sumps and berms
- Flexible options for small or large diameter tanks
- Monitoring options available for liquid hydrocarbons or produced water leak detection

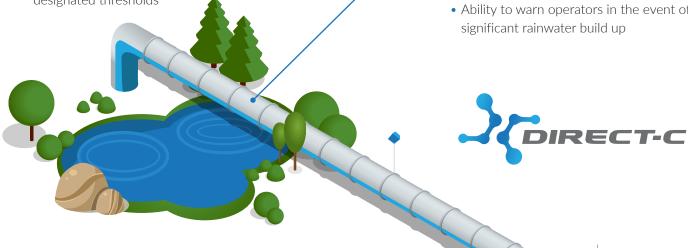

Wellheads

- Direct-C's WrapSense™ can be installed as a collar around the casing
- BermSense[™] can be installed to monitor the entire pad containment berm

Above Ground Pipelines

- Direct-C's WrapSense[™] monitors for liquid hydrocarbon leaks on above ground pipelines, pig traps, valves, etc.
- Can be installed externally or underneath insulation cladding
- Installations can cover a few meters to a few kilometers of high-interest areas
- Ability to add temperature sensors to warn operators when assets are operating outside of designated thresholds

Below Ground Pipelines

- Direct-C's **SubSense™** probes are installed in-ground next to underground pipelines at areas of interest
- Monitoring options for liquid hydrocarbons and/or produced water leak detection
- Warnings for water table fluctuations or ground movement provides operators additional integrity management data

We Monitor, You Get **Actionable Intelligence**

proprietary algorithms and forwards relevant data notifications to Operators when action is needed.

Berms

- Direct-C's **BermSense™** is suitable to monitor all assets within a berm
- Units can be easily installed with or without ground disturbance
- Monitoring options available for liquid hydrocarbons and/or produced water leak detection
- Ability to warn operators in the event of

Remove Uncertainty and Reduce Risk. Be Sure.
